

Family S strategy steps

Family D cost models, same logical count

Family D cost-model ratio

Family D corrected ratios are 1.109, 0.436, 0.847, 1.219 at EP 8, 32, 128 and 256; the superseded floor-omitting ratios are 0.026, 0.353, 0.803, 1.187. The corrected packet arm charges aggregate half-precision all-gather and reduce-scatter floors once outside local/fabric max service. EP 8 has no cross-node traffic. EP 256 uses an unscored component-wise diagnostic. Family S compares the dense fallback with corrected sparse routed FP8 dispatch plus BF16 combine; its floor-omitting series is superseded.
