

# What changes inside NCCL on two GPUs?

NCCL 2.31.2 | automatic selection versus fixed Ring protocols | 65 control sizes

Automatic    Ring / LL    Ring / LL128    Ring / Simple

Latency: uninstrumented process medians with interquartile shading.

Selections: separate profiler runs. Channels divide GPU work among parallel communication paths.

A threshold is attributed only when recorded choices and the fixed-choice intervention agree.
