

DGX A100 | one NVLink switching tier

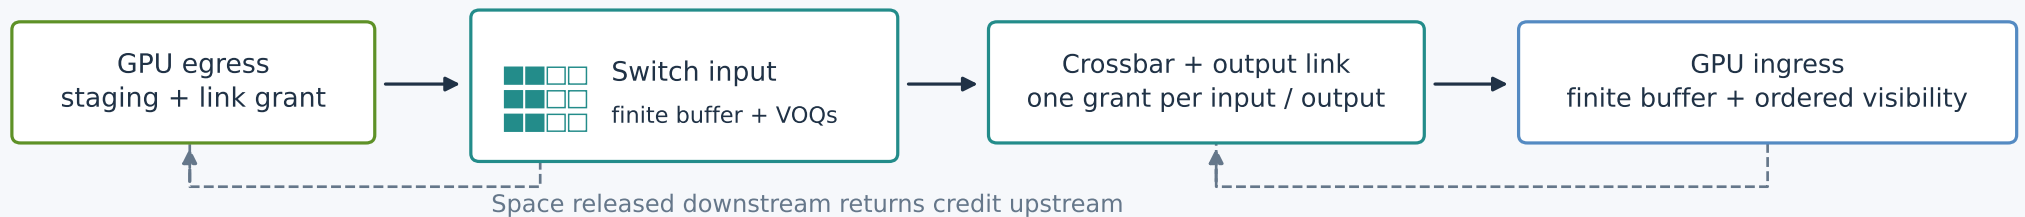

8 GPUs / 6 independent NVSwitch chips / 12 links per GPU

Each link: 25 GB/s per direction. Each GPU: 300 GB/s send + 300 GB/s receive.

Color groups independent point-to-point links; it does not denote a shared bus.

One packet through one switch: model queue boundaries

Public wiring; declared queue sizes, grant policy and forwarding. CPU/PCIe context simplified; storage and management omitted.
