

NV4 packet flow dynamics through TX, pass-through switch and RX

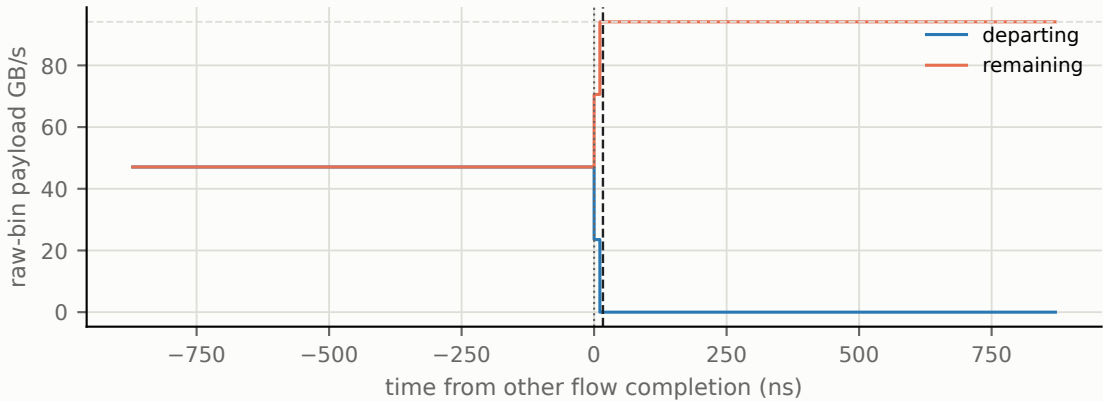

Three flows join on a fixed stagger; reverse targets make flow A finish last

1 to 2: incumbent steps down; open at 13.886 ns, exact

2 to 1: remaining flow returns to solo cadence at 16.684 ns

Raw fixed bins, no smoothing: overall 696,320 ps; transitions 10,880 ps.
Mixed evidence: TX/RX plateaus measured; packet, link, bond, credit, buffer and queue terms candidates; NV4 switch structural.
