

Cross-seed FCT dispersion on the identical stagger schedule

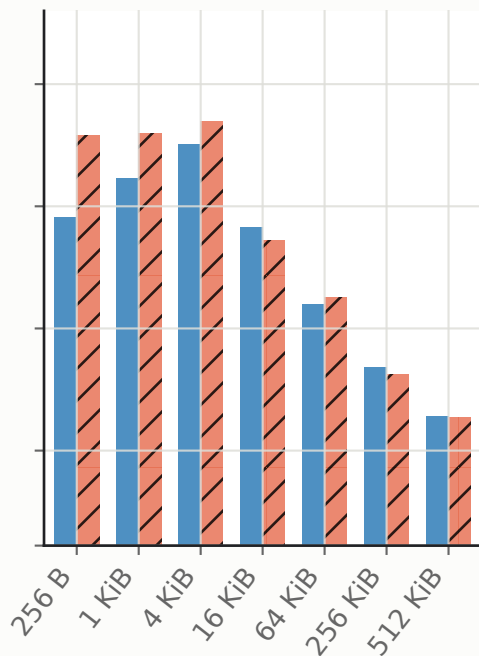

Incast degree 1

Incast degree 2

Incast degree 3

$D = (\max \text{ seed p50} - \min \text{ seed p50}) / \text{median seed p50}$. Lower is tighter.
Symmetric-log y scale; 0 to 0.1% is linear. 256 B is one packet: NVLink 12.194 ns; rnic-nn is 5.440 / 2.720 / 2.628 ns.
One NVLink credit round is 64 KiB payload and returns in 200 ns.
