

DeepSeek-V3 fourth scored run: MTP REFUTED (52.49% low) Run-3 2K and 4K prefill PASS rows carried forward unchanged

MTP arithmetic: 128 requests/node × 2 emitted tokens/request; 2.033951 ms × 61/4 = 31.01775275 ms; prediction 8,253.338 tokens/s/node.

Scored once against 17,373 tokens/s/node at batch 128 and KV 4,000. No admissible EP72 decode attenuation; COMP-74 propagation remains open.

Prefill and decode are separate experiments. The frontier figure stays byte-locked because its v2 contract has no MTP marker slot.
