

Pipeline activations on the rail-optimized and node-local Clos variants (64 endpoints, 400G, 64 KiB per hop)

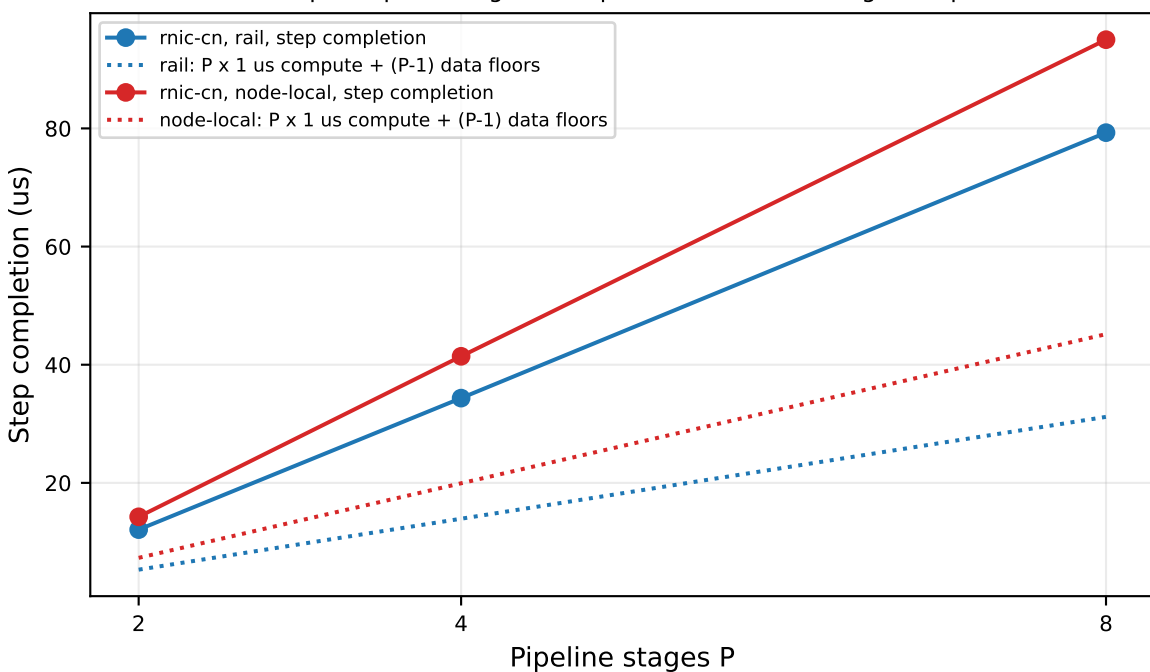

A: PP hop p99 FCT against pipeline depth, physical, 400G

B: PP hop p99 against concurrent EP load (physical), 0 ps change

C: step completion against depth, 1 us declared stage compute

D: background EP all-to-all phase makespan, 1 MiB per remote pair
