

Tail FCT versus incast degree

Nearest-rank p99 and per-seed maximum; lines are seed means and shades are min-max.

Evidence: SIMULATED FCT; MEASURED endpoint plateaus; DECLARED packet and credit constants; STRUCTURAL NV4 switch identity.

SIMULATED MESH EXTRAPOLATION at degrees 4/8/16; no NV4 hardware counterpart; NVSwitch-class hardware is the physical route

SMALL-FLOW INCAST IS A MODEL PREDICTION; real true-sync launch is not constructible through sequential PCIe writes; hardware identification is long-flow only
