

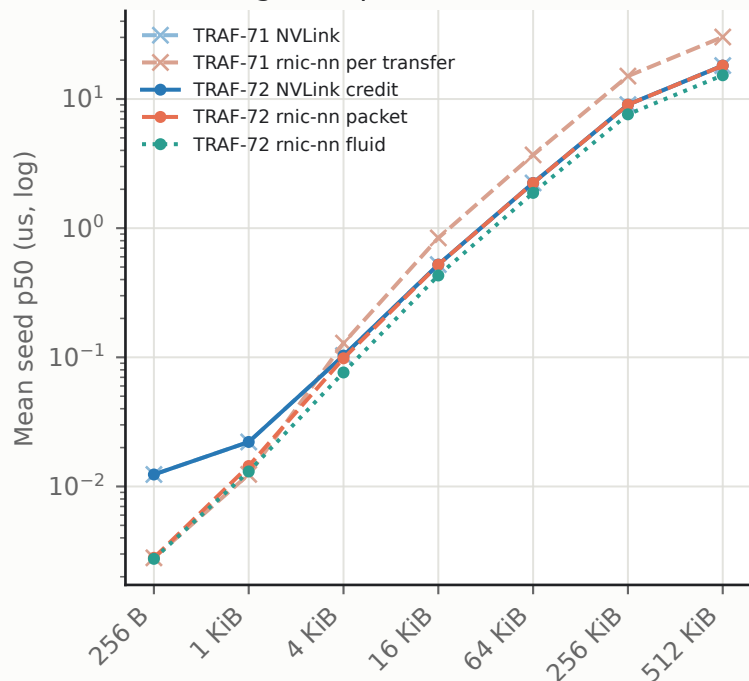

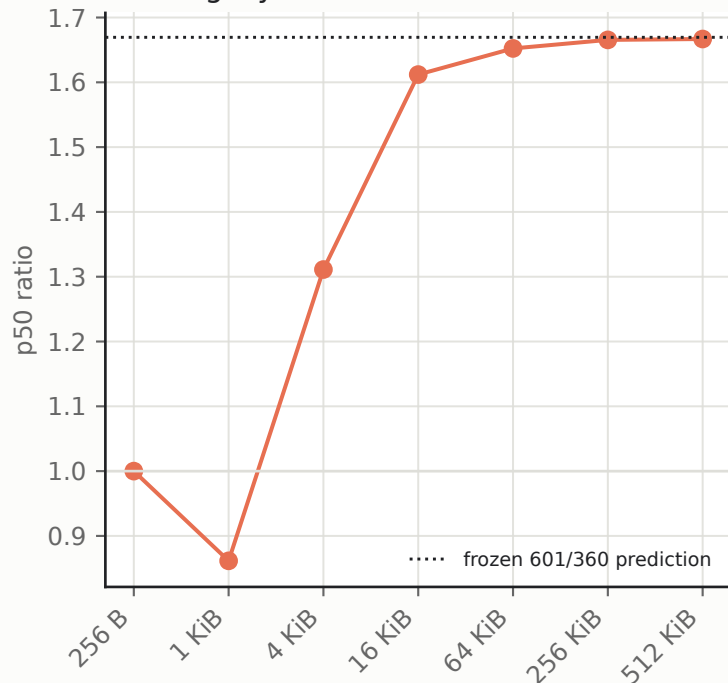

Mapping audit: same capacity, corrected fair-share entity

Degree-3 p50 before and after

Legacy rnic-nn / corrected rnic-nn

Degree-3 receiver capacity is 207.101921876 GB/s in both studies; only the active entity changes.

Evidence: SIMULATED FCT; MEASURED endpoint plateaus; DECLARED packet and credit constants; STRUCTURAL NV4 switch identity.

SMALL-FLOW INCAST IS A MODEL PREDICTION; real true-sync launch is not constructible through sequential PCIe writes; hardware identification is long-flow only
