

—●— B100 one-node intra-node-heavy analytical
—●— H100 two-node serialized split analytical
—●— H100 nine-node EP72 incast analytical
● B100 one-node intra-node-heavy roofline
● H100 two-node serialized split roofline
● H100 nine-node EP72 incast roofline dots

Analytical frontier and roofline-simulation dots

Frozen inter-then-intra elapsed attribution

Each stack telescopes exactly from the analytical floor to the simulated step. Raw off-critical network excess remains in the result table. The intra-node profile is an A100 NVLink3 candidate used across architecture, not H100 or B100 measurement evidence.
